### MouseWorks® Software

This award-winning software saves time and movement, allowing programmable buttons and scroll wheels to reduce complex, repetitive tasks to a single click. Users can customize the buttons to perform hundreds of different functions at the touch of a finger, while the hand rests comfortably on the mouse or trackball.

DIAMONDEYE® OPTICAL TECHNOLOGY

### DiamondEye™ Optical Technology

The most accurate and precise optical cursor control technology on the market, adding proprietary firmware to industry-leading optical frame rates and resolution. DiamondEye technology anticipates every move and optimizes the cursor speed for the task at hand, matching pinpoint accuracy to even the fastest movements. Provides trackball and mouse users unmatched smoothness and precision.

### QuickRF™ Wireless Technology

Provides users 'unleashed' performance within an operating range of six feet from the receiver. Higher report rates, sending data from the device to the computer, provide faster and smoother operation. And extended battery life ensures higher reliability.

### Bluetooth® Wireless Technology

For secure, interference-free performance with Bluetooth® enabled computers and up to seven other Bluetooth devices, all within a wireless range of up to 30 feet for maximum freedom.

### Spill-Safe Feature

Sealed membrane design that lets liquids run through without damaging keyboard electronics. Extends the life of the keyboard.

### Comfort Type Design

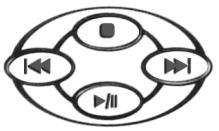
Features angled keys that help to guide wrists into a more relaxed position for hours of comfortable computing. Standard keyboard layout eliminates the need to relearn a new layout.

### Refined Shapes and Grips

Kensington's PilotMouse® line features refined shapes that fit the contours of the hand, and flexible rubber grips for added comfort and maximum control of programmable buttons.

### Scroll Ring®

Encircling the ball so that it remains within fingertip range, the innovative Scroll Ring™ moves at the touch of a finger to scroll smoothly in any document or Web page. Trackball users have fluid, effortless and precise fingertip scrolling and the hand never has to leave the ball.



### Multimedia Hot Keys

Intuitive multimedia hot keys provide quick, one-button control of popular audio/video and Internet functions. Can be pre-set or customizable by users to save time and increase productivity.

### Low Profile Designs

Style and convenience are combined in smaller, sleeker, low profile keyboards, designed to complement the look of today's computer systems and save valuable workspace.
